San Gabriel (SAGA1) 2021 Site Report

The Interagency Monitoring of Protected Visual Environments (IMPROVE) is a long-term air pollution measurement program designed to document and track visibility in protected areas. IMPROVE samples and analyzes the haze particles that impair visibility so their sources can be identified and addressed.

Samples Successfully Collected and Analyzed in 2021 by Filter Type. PTFE: 72 (27.3%), Nylon: 140 (53.0%), Quartz: 66 (25.0%)

The plots below show temporal trends for site 06-037-9034 alongside network-wide CSN and IMPROVE median concentrations. The top plot shows the variability of the reconstructed fine mass (RFM) concentrations during 2021; RFM can only be calculated if all three filters collected on a sampling day are valid. The bottom plot illustrates the long-term trends of ambient concentrations; the gray shaded region represents the range of values measured each year at this site, illustrated using the 10th and 90th percentile values.

More Information

The following plots summarize the chemical composition of particles collected at this site. The monthly averaged compositions calculated from 2017-2021 data are shown on the left while compositions for the day with the highest measured concentrations during 2021 are shown on the right.

### Average Monthly Particle Composition

**Components**

- **Salt**: $1.8 \cdot Chloride$
  - Natural Sources: Ocean spray, dry lakebeds
  - Anthropogenic Sources: Chemical manufacturing, lake consumption

- **Soil Dust**: $2.2 \cdot Al + 2.49 \cdot Si + 1.63 \cdot Ca$
  - Natural Sources: Soil resuspension, dust storms
  - Anthropogenic Sources: Construction, agriculture, deforestation, unpaved roads

- **Soot**: $Elemental \text{ Carbon}$
  - Natural Sources: Wildfires
  - Anthropogenic Sources: Motor vehicles, wood burning, smoking

- **Organic Matter**: $1.4 \cdot Organic \text{ Carbon}$
  - Natural Sources: Plants, animals, wildfires
  - Anthropogenic Sources: Motor vehicles, cooking oils, household cleaners

- **Nitrate**: $1.29 \cdot \text{Nitrate}$
  - Natural Sources: Plants, animals
  - Anthropogenic Sources: Fertilizer, stock yards, chemical manufacturing

- **Sulfate**: $4.125 \cdot Sulfur$
  - Natural Sources: Volcanism
  - Anthropogenic Sources: Coal-fired power plants, chemical manufacturing

### Highest Day

**Components**

- **salt**
- **soil.dust**
- **soot**
- **organic.matter**
- **nitrate**
- **sulfate**

**2021-04-16**

**Micrograms Per Cubic Meter**

- **Components Calculation**
  - **Salt**: $1.8 \cdot Chloride$
  - **Soil Dust**: $2.2 \cdot Al + 2.49 \cdot Si + 1.63 \cdot Ca$
  - **Soot**: $Elemental \text{ Carbon}$
  - **Organic Matter**: $1.4 \cdot Organic \text{ Carbon}$
  - **Nitrate**: $1.29 \cdot \text{Nitrate}$
  - **Sulfate**: $4.125 \cdot Sulfur$

### The following map shows the average RFM concentrations for nearby sites in both CSN and the rural IMPROVE Network. The point shapes indicate which network the sites are associated with. The color bar indicates the average annual RFM concentration (micrograms per cubic meter) measured at each site in 2021.
